

Cyber Security Solutions - Assure6™

Assure6 provides total protection for your network – today and tomorrow

Government and Industry's Partner

For over 18 years, leaders across government and industry have trusted Salient Federal Solutions' advanced networking security and systems engineering to protect their global networks.

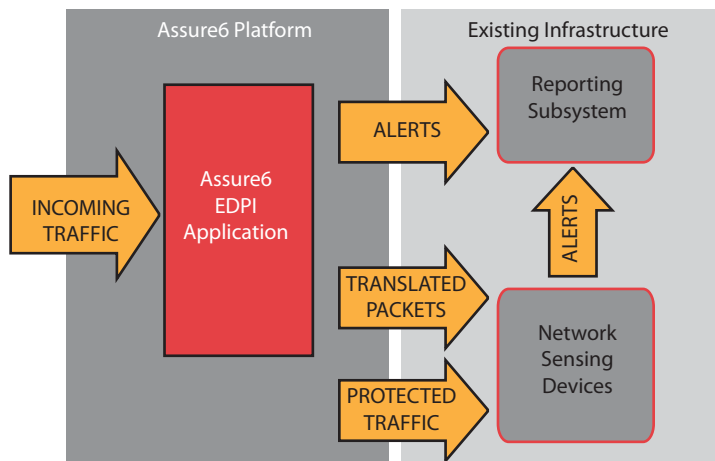

Building on the needs of our clients, Salient has developed and successfully deployed, the first cyber security policy manager to detect and block IPv6-based malicious attacks. Assure6 enhances the ability to secure information regardless of traffic type and detects unknown IPv6 security threats in existing networks. This ensures the protection of networks while also providing a safe and reliable transition to IPv6.

In 2010, Salient conducted IPv6 vulnerability testing for Department of Defense agencies. The results highlighted the Enhanced Deep Packet Inspection capabilities of Assure6 and its ability to detect IPv6 security threats currently undetectable with existing security tools. These tests confirmed the positive feedback from other agencies and private sector organizations testing and deploying Assure6.

Cutting-Edge Technology

The number of IPv6 vulnerabilities that traditional hardware and software assurance vendors can detect is limited because there are significant differences between IPv4 and IPv6 protocols. Salient built and designed Assure6 from the ground up specifically to safeguard IPv6 traffic.

Using Enhanced Deep Packet Inspection (EDPI) technology, Assure6 can recognize tunneled IPv4 and IPv6 traffic and inspect the traffic for known attacks as shown below:

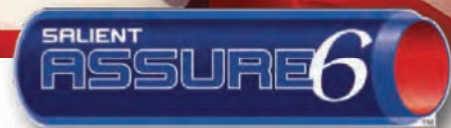

Beginning in December 2009, the Federal Government required that IPv6 compliant products are included in all new information technology acquisitions using Internet Protocol. To assist in this transition, we have successfully developed and deployed Assure6 - the first cyber security appliance to detect and block malicious attacks.

Cyber Security Solutions - Assure6™

Flexible and Adaptive

The *Assure6* suite is a commercial off-the-shelf (COTS) product that allows enterprise-wide policy management of IPv6. It is a fully web-architected solution that aligns with the Federal Government's Comprehensive National Cybersecurity Initiative (CNCI) and supports the Department of Homeland Security's Einstein Program.

Features:

- ▶ Protects against IPv6-related vulnerabilities and threat vectors
- ▶ Provides support for “user defined,” custom IPv6 rules
- ▶ Enables additional analysis of encoded and IPv6 traffic
- ▶ Provides secure common policy-based enterprise management consistently throughout the network
- ▶ Integrates with existing enterprise infrastructure and event reporting with Event Management Systems
- ▶ Provides protection against malformed - often malicious - IPv6 packets

Assure6 is the most trusted IPv6-centric COTS intrusion prevention and detection system among the federal, Defense, intelligence, and civilian agencies, as well as among private industry.

About Salient Federal Solutions

Salient Federal Solutions is a leading provider of Federal IT and engineering solutions that enable government and industry to respond quickly to new or surge mission requirements with exactly the right people, skills, expertise, and technical solutions. The company works to accelerate mission impact by delivering highly adaptable technology services, engineering solutions, and domain expertise that enable customers to rapidly meet the pressing requirements of today, while anticipating tomorrow's evolving challenges.

Salient takes a consultative approach to understanding your business and IT strategy to determine the best solutions fit. We offer cyber security and enterprise transportation solutions and services in the areas of:

- ▶ Certification and Compliance
- ▶ Information Assurance
- ▶ Network Security Engineering
- ▶ Security Education and Training
- ▶ Systems Engineering
- ▶ Vulnerability Management
